

Vibe Coding in Power Apps

How to start, what works today, and where it breaks

AI is changing **how** apps are built.

Not whether apps are built.

Vibe Coding means...

Describe Ideas

Natural language as the starting point

Generate with AI

Apps created from prompts, not code

Accelerate Delivery

Faster from idea to working screen

Lower Barriers

Makers and non-developers included

But there's a problem.

AI-generated apps are **NOT** automatically enterprise-ready.

Vibe Coding Has 3 Layers

1

Layer 1

AI builds **for** you: rapid generation, mockups, prototypes

2

Layer 2

AI builds **with** you: assisted maker workflows, real apps

3

Layer 3

AI **accelerates** developers: Code Apps, full frontend control

vibe.powerapps.com

 Best for

- Mockups & prototypes
- Workshops & ideation
- Idea validation
- UX exploration

✗ Usually not ideal for

- Enterprise architecture
- Governance & security
- Complex data structures
- Long-term maintainability

DEMO 1

One-Line Prompt

Generating an app from a single sentence fast, visual, instant.

Prompt

Build a gamified cyber security awareness app for employees.

What do you want to build?

Build a gamified cyber security awareness app for employees

Work IQ

Plan

This preview feature only supports English and uses generative AI. [See limits](#)

Suggestions

Patient appointment scheduler

Create an app for healthcare staff that helps to schedule patient appointments.

Campaign request manager

I want to create an app for marketing teams that helps to manage campaign requests.

Support ticket tracker

Create an app for customer service agents that helps to log and resolve support tickets.

Demo 1 Results

✓ What Worked

- Fast generation
- Generic Design
- Instant UX on screen
- Immediate visualisation

✗ What Broke

- Weak data structure
- Generic gamification
- Generic branding
- No governance thinking
- No architecture thinking

DEMO 2

Structured Markdown Prompt

Same AI. Same platform. Completely different starting point.

Prompt

Markdown File

What do you want to

Describe what you want to build, whether it's an app or a full solution for your users.

This option is disabled if you don't have a Copilot license. [Learn more](#)

Plan   

 Add work request

This preview feature only supports English and uses generative AI. [See terms](#)

Suggestions

Patient appointment scheduler

Create an app for healthcare staff that helps to schedule patient appointments.

Campaign request manager

I want to create an app for marketing teams that helps to manage campaign requests.

Support ticket tracker

Create an app for customer service agents that helps to log and resolve support tickets.

Your previous work

Same AI. Different outcome.

Because the prompt contained structure, roles, data thinking, and intentional design.

Why Structure Changes Everything

Structure

Clear information hierarchy from the start

Data Thinking

Schema and relationships considered early

Roles

User types and permissions defined upfront

System Thinking

Designed for governance and longevity

The difference was not the AI. It was the **structure behind the intent.**

AI generated an **app**.

Not a system.

Microsoft is not positioning vibe.powerapps.com as:
'AI builds your enterprise platform for you.'

Microsoft is positioning it as:
A FASTER PATH FROM IDEA TO IMPLEMENTATION.

AI Builds **With**You

make.powerapps.com

This is where most real production apps will live.

AI-Assisted Maker Workflows

- Formula & flow assistance
- Dataverse recommendations
- Copilot suggestions
- AI troubleshooting

Real-World Use Cases

- Internal business apps
- Approval systems
- Learning platforms
- Service management

LAYER 3

AI Accelerates **Developers**

Welcome to Code Apps, when full frontend control meets low-code platform.

Code Apps Introduce

- React & TypeScript
- VS Code & Git integration
- GitHub Copilot
- Full frontend control

Best For

- Enterprise frontend experiences
- Advanced integrations
- Complex UI systems
- Pro developer workflows

Additional cost

The **real** shift.

AI is not replacing developers. It is **reducing the distance** between ideas and execution.

The future belongs to people who understand **when AI helps** and when **architecture matters**.
